ΑP	PENDIX 1 – Critical Lands and Water Identification Maps (CLIP) Definitions	. 42

1. Introduction

The Conservation Collier Program (Program) is an environmentally sensitive land acquisition and management program approved by the Collier County Board of County Commissioners (Board) in 2002 and by Collier County Voters in 2002 and 2006. The Program was active in acquisition between 2003 and 2011, under the terms of the referendum. Between 2011 and 2016, the Program was in management mode. In 2017, the Collier County Board reauthorized Conservation Collier to seek additional lands (2/14/17, Agenda Item 11B). On November 3, 2020, the Collier County electors approved the Conservation Collier Re-establishment referendum with a 76.5% majority.

This Initial Criteria Screening Report (ICSR) has been prepared for the Conservation Collier Program to meet requirements specified in the Conservation Collier Implementation Ordinance, 2002-63, as amended, and for purposes of the Conservation Collier Program. The sole purpose of this report is to provide objective data to demonstrate how properties meet the criteria defined by the ordinance.

The following sections characterize the property location and assessed value, elaborate on the initial and secondary screening criteria scoring, and describe potential funding sources, appropriate use, site improvements, and estimated management costs.

This ICSR evaluates the entire Panther Walk Preserve Target Protection Mailing Area (TPMA) – a total of 33 parcels (70.6 acres). Parcels within the TPMA, which are outside of the Panther Walk Preserve Multi-Parcel Project Area, must be evaluated by the Conservation Collier Land Acquisition Advisory Committee (CCLAAC) and placed on the recommended Conservation Collier Active Acquisition List for Board consideration.

2. Summary of Property

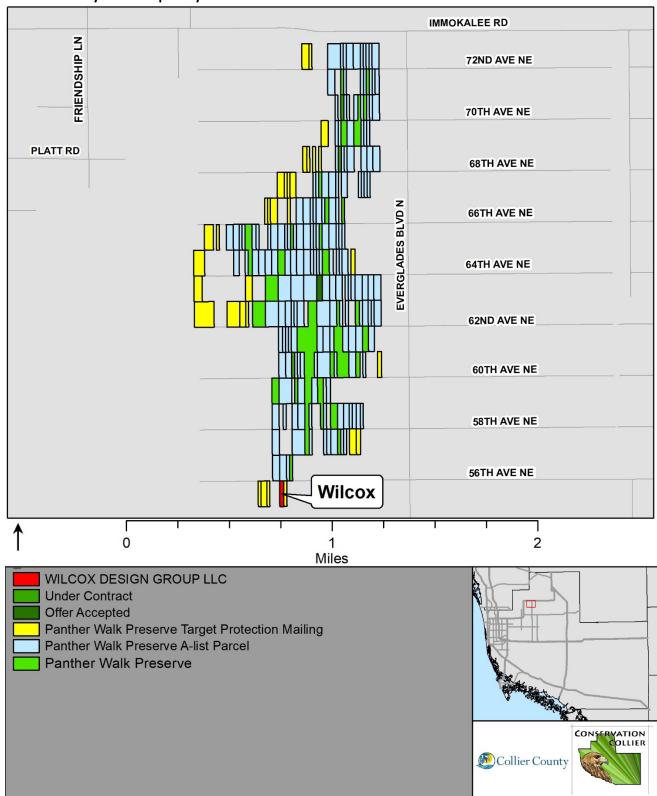

Figure 1 - Parcel Location Overview

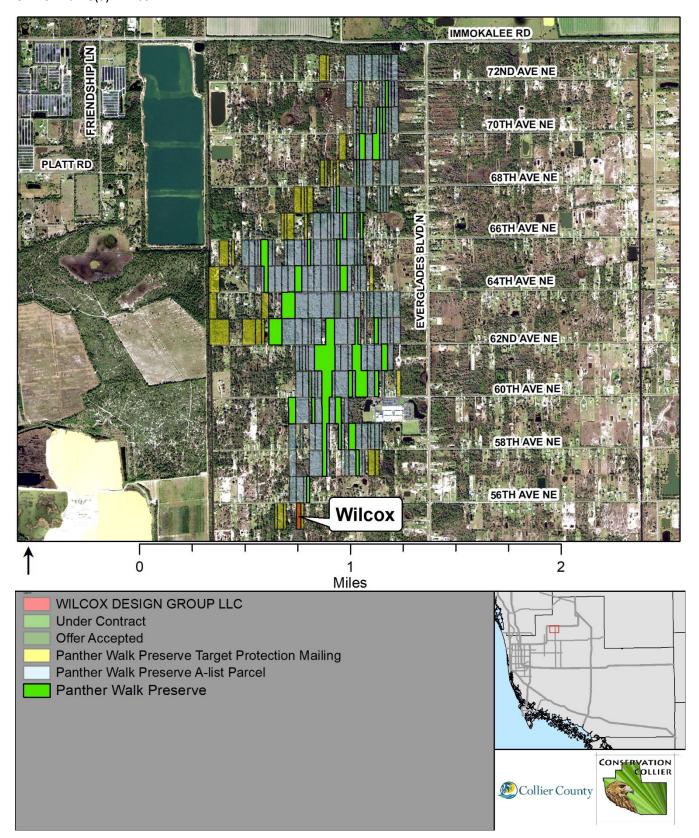

Figure 2 - Parcel Close-up

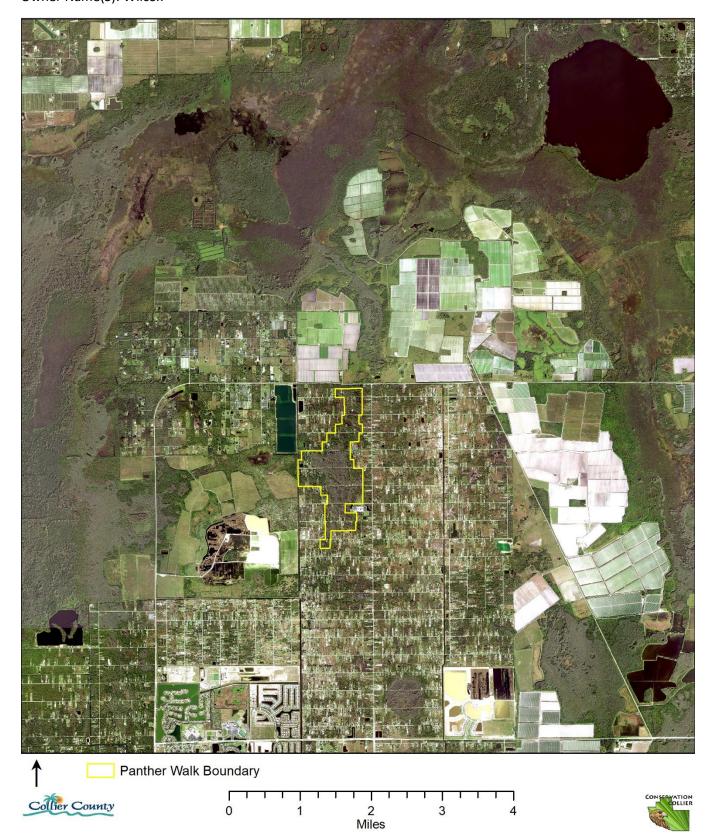

Figure 3 - Aerial of Panther Walk Preserve Multi-parcel Project and TPMA boundary

2.1 Summary of Property Information

Table 1 – Summary of Property Information

Characteristic	Value	Comments
Name	Multiple	1 parcel within the TPMA applied - Wilcox
Folio Number	Multiple	33 parcels
Target Protection Area	Northern Golden Gate Estates	
Size	70.6 total acres	33 parcels ranging between 1.14 and 7.60 acres
Section, Township, and Range	Multiple	S6, T48, R28; S30, T47, R28; and S31, T47, R28
Zoning Category/TDRs	Е	Estates
Existing structures	None	
Adjoining properties and their Uses	Residential; undeveloped	Low-density, single-family homes
Development Plans Submitted	None	
Known Property Irregularities	None known	
Other County Dept Interest	Transportation	Parcels along Everglades Blvd. may be needed for roadway expansion

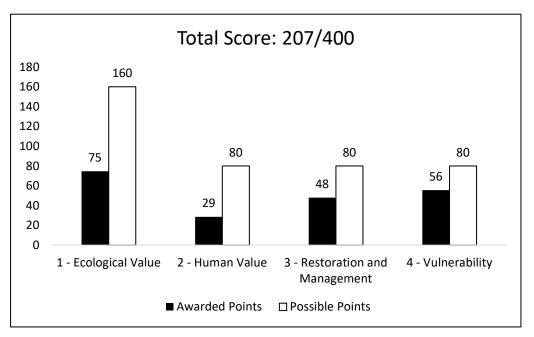

Figure 4 - Secondary Criteria Score

Table 2 - Secondary Criteria Score Summary

Criteria	Awarded Weighted Points	Possible Weighted Points	Awarded/Possible Points
1 - Ecological Value	75	160	47%
1.1 - Vegetative Communities	35	53	65%
1.2 - Wildlife Communities	19	27	70%
1.3 - Water Resources	15	27	55%

4.1 - Zoning and Land Use	56	58	96%
4.2 - Development Plans	0	22	0%
Total	207	400	52%

2.2 Summary of Assessed Value and Property Cost Estimates

The interest being appraised is fee simple "as is" for the purchase of the site. A value of the parcel was estimated using only one of the three traditional approaches to value, the sales comparison approach. It is based on the principal of substitution that an informed purchaser would pay no more for the rights in acquiring a particular real property than the cost of acquiring, without undue delay, an equally desirable one. Three properties were selected for comparison, each with similar site characteristics, utility availability, zoning classification and road access. No inspection was made of the property or comparables used in this report and the Real Estate Services Department staff relied upon information solely provided by program staff. The valuation conclusion is limited only by the reported assumptions and conditions that no other known or unknown adverse conditions exist.

If the Board of County Commissioners choose to acquire this property, an appraisal by an independent Real Estate Appraiser will be obtained at that time. Pursuant to the Conservation Collier Purchase Policy, one appraisal is required for each of the Panther Walk TPMA parcels, which have an initial valuation less than \$500,000; 1 independent Real Estate Appraiser will value the subject properties and that appraisal report will determine the actual value of the subject properties.

Table 3. Assessed & Estimated Value

Property owner	Address	Acreage	Assessed Value*	Estimated Value**
Wilcox Design Group LLC	No address	1.59	\$55,650	TBD

^{*} Assessed Value is obtained from the Property Appraiser's Website. The Assessed Value is based off the current use of the property.

2.2.1 Zoning, Growth Management and Conservation Overlays

Zoning, growth management and conservation overlays will affect the value of a parcel. The parcels are zoned Estates which allows 1 unit per 2.25 acres.

^{**}The Estimated Market Value for the Wilcox parcel will be determined by Collier County Real Property Management prior to Board ranking.

2.3 Summary of Initial Screening Criteria Satisfaction (Ord. 2002-63, Sec. 12)

Criteria 1: CLIP Priority 1 Natural Community

Does the property contain Upland Hardwood Forest, Scrub, Coastal Upland, Dry Prairie, or Upland Pine? **NO**

Criteria 2: CLIP Priority 2 Natural Community

Does the property contain Pine Flatwoods or Coastal Wetlands? YES

TPMA contains Mesic Flatwoods.

Criteria 3: Other Native, Natural Communities

Does the property contain other native, natural communities? N/A

The parcels also contain freshwater marsh, oak hammock, and cypress, but already contain a CLIP Priority 2 Natural Community.

Criteria 4: Human Social Values

Does the property offer cultural values, appropriate access for natural resource-based recreation, and the enhancement of the aesthetic setting of Collier County? **YES**

These properties may be accessed from several roads between 56th Ave NE and—72th Ave NE off Everglades Boulevard North. The parcels offer land-based opportunities for natural resource-based recreation consistent with the goals of this program, including but not limited to, environmental education, hiking, and nature photography.

Criteria 5: Water Resources

Does the property offer opportunities for protection of water resource values, including aquifer recharge, water quality enhancement, protection of wetland dependent species habitat, wildfire risk reduction, storm surge protection, and flood control? **YES**

Hydric soils exist on the majority of the parcels and, wetland plant communities are found throughout most of the parcels.

Criteria 6: Biological and Ecological Value

Does the property offer significant biological values, including biodiversity and listed species habitat? **YES**

Because of their small size, each parcel individually does not offer significant biological values. However, as a whole, the parcels will enhance the Panther Walk Preserve. The parcels all fall within or adjacent to the Horsepen Strand which flows south from Corkscrew Regional Ecosystem Watershed (CREW) owned by the South Florida Water Management District and Audubon Florida.

Criteria 7: Enhancement of Current Conservation Lands

Does the property enhance and/or protect the environmental value of current conservation lands through function as a buffer, ecological link or habitat corridor? **YES**

These parcels are adjacent to the Panther Walk Preserve Multi-parcel Project Area.

Criteria 8: Target Area

Is the property within a Board-approved target protection mailing area? YES

Panther Walk Preserve TPMA

The Panther Walk Preserve TPMA parcels met 6 out of the 8 Initial Screening Criteria.

3. Initial Screening Criteria

3.1 Ecological Values

3.1.1 Vegetative Communities

Cypress: This habitat is dominated by mature cypress growing in deep water. The midstory is comprised of strangler fig and coastal plain willow. The understory is comprised of swamp fern, alligator flag, and other submerged and emergent vegetation. Numerous species of rare epiphytes are found is these forests.

Oak/Pine hammock: This habitat is dominated by laurel oak, slash pine, and cabbage palms. The midstory consists of myrsine and saw palmetto. The understory consists of ferns, muscadine, and greenbriers.

Freshwater marsh: The deepest portions of these marshes are dominated by coastal plain willow with either pickerel weed or alligator flag. The shallower areas are comprised of lance leaf arrowhead and sedges which give way to grasses and ferns around the perimeter.

Mesic flatwoods: This habitat is dominated by slash pines with little midstory. The understory is comprised of saw palmetto, rusty lyonia, and grasses. Flatwoods present show both hydric and mesic qualities within a single parcel. Flatwoods are listed as a priority natural community in our region by the Critical Lands and Waters Identification Project.

Table 4. Listed Plant Species

Common Name	Scientific Name	State Status	Federal Status
Stiff-leaved wild-pine, Cardinal airplant	Tillandsia fasciculata	Endangered	Not Listed

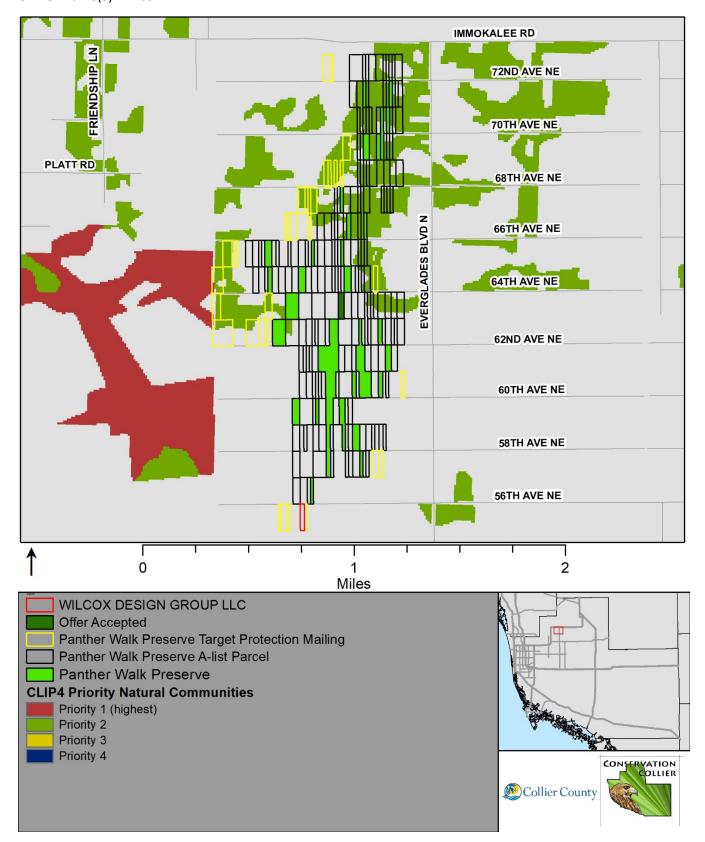

Figure 5 - CLIP4 Priority Natural Communities

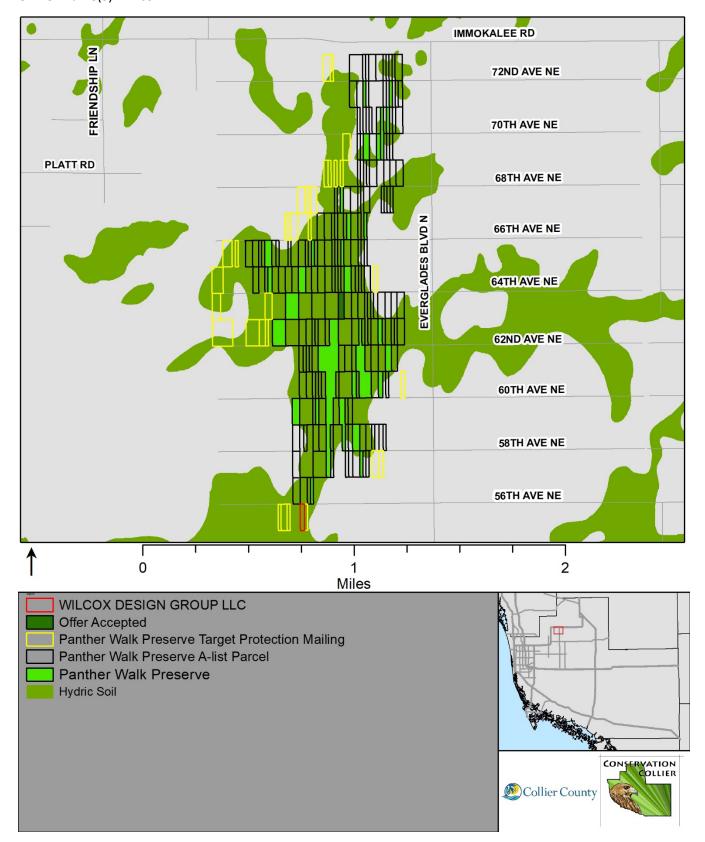

Figure 6 - Florida Cooperative Land Cover Classification System

Figure 7 – Cypress

Figure 8 – Wet prairie situated between pine flatwood and mixed wetland hardwood communities

3.1.2 Wildlife Communities

The biological value of these parcels is primarily the result of containing high integrity habitats ranging from upland pine flatwoods to deep cypress strand forests. These parcels were disturbed in the past but have had decades to mature into communities that are well adapted to their current environment. These high-quality habitats provide the basis for a thriving food chain for both terrestrial and aquatic species from invertebrates to the largest predators. Black bear scat was found on several parcels and Florida panthers are well documented within the adjacent Panther Walk Preserve. Although not detected during the site visit, American alligators are known to utilize the strand. Numerous river otters were observed crossing the roads. These parcels provide habitat for several species of listed birds which have all been documented in the immediate area including wood storks, little blue herons, Florida sandhill cranes, Audubon's crested caracaras, and snail kites. Wetlands of varying depth provide foraging habitats nearly year-round.

Table 5 – Listed Wildlife Detected

Common Name	Scientific Name	State Status	Federal Status	Mode of Detection
Little blue heron	Egretta caerulea	Threatened	n/a	Observed on site visit
Florida sandhill crane	Antigone canadensis pratensis	Threatened		Observed on site visit
Crested Caracara	Caracara cheriway	Threatened	Threatened	
Everglades Snail Kite	Rostrhamus sociabilis plumbeus	Endangered	Endangered	
Florida panther	Puma concolor coryi	Endangered	Endangered	Trail camera on Panther Walk Preserve

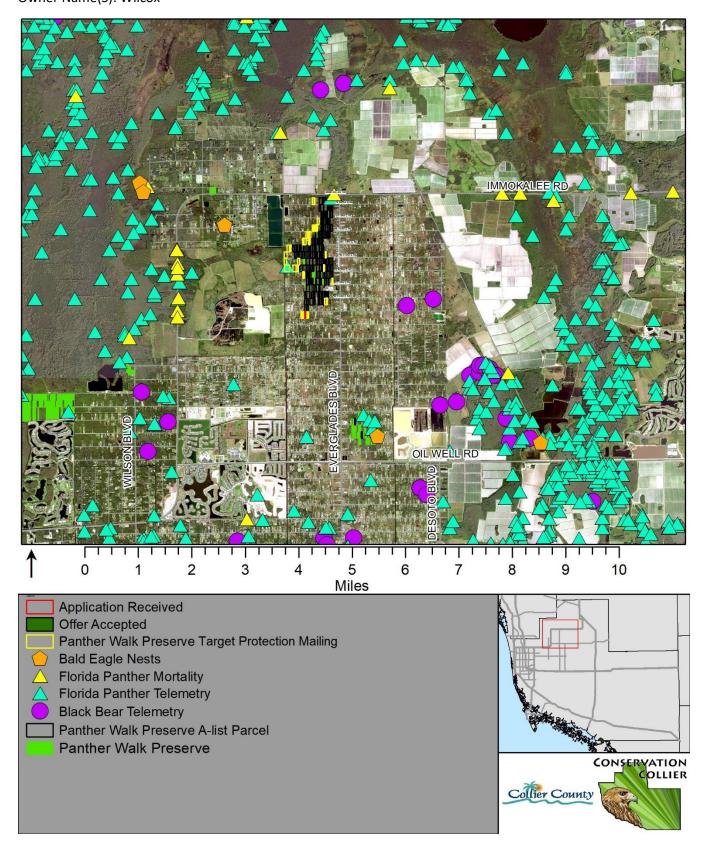

Figure 9 - Wildlife Spatial Data (i.e., telemetry, roosts, etc)

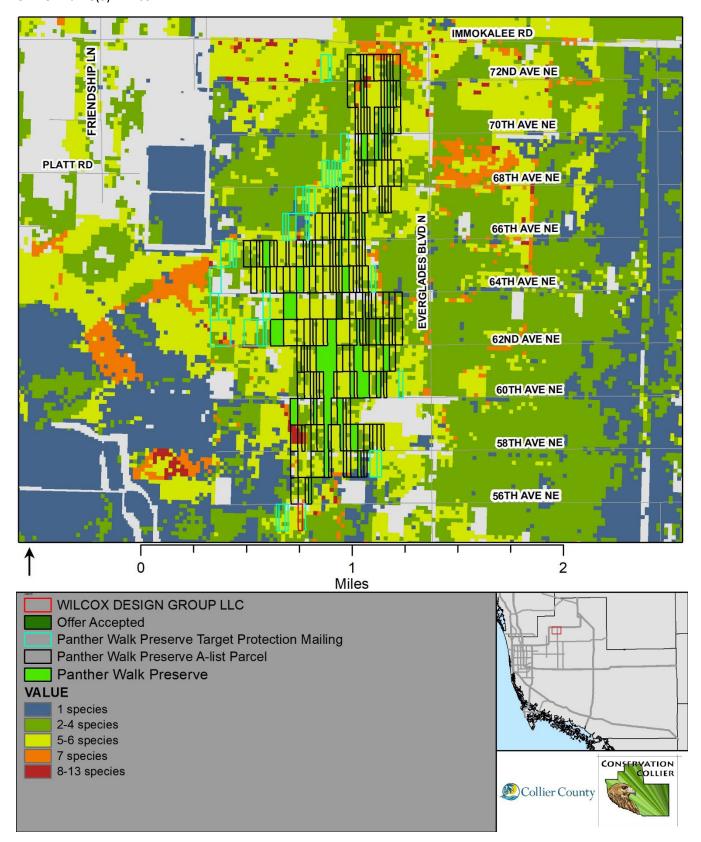

Figure 10 - CLIP4 Potential Habitat Richness

3.1.3 Water Resources

These parcels fall within or are adjacent to the northern reaches of the Horsepen Strand. Strands are a type of forested swamp that form slow flowing, linear drainage channels across flatlands with high water tables. The Horsepen Strand begins at Immokalee Rd in the Northern Golden Gate Estates and flows south into the North Belle Meade area located north of I-75. These parcels protect water resources significantly. They provide recharge capacity for the Surficial Aquifer. Properties in this area are subject to frequent flooding. These parcels provide critical flood water attenuation as more land is cleared and filled for development. Wetland vegetation on these parcels slows down the flow of water and filters out nutrients and sediments before it reaches the canals which flow into the gulf. The parcels also provide high quality habitat for wetland dependent species, especially wading birds.

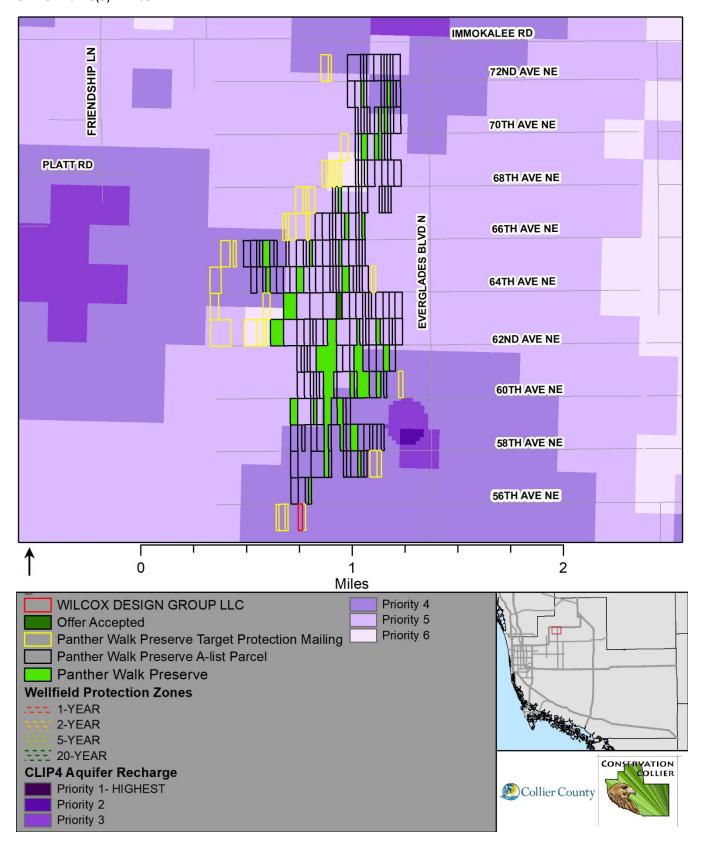

Figure 11 - CLIP Aquifer Recharge Priority and Wellfield Protection Zones

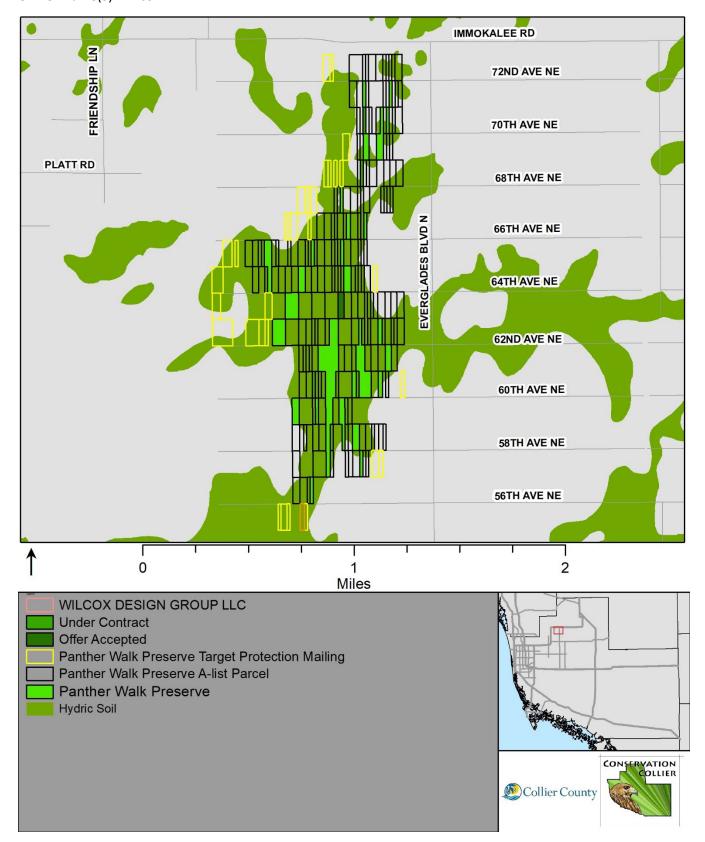

Figure 12 - Collier County Soil Survey

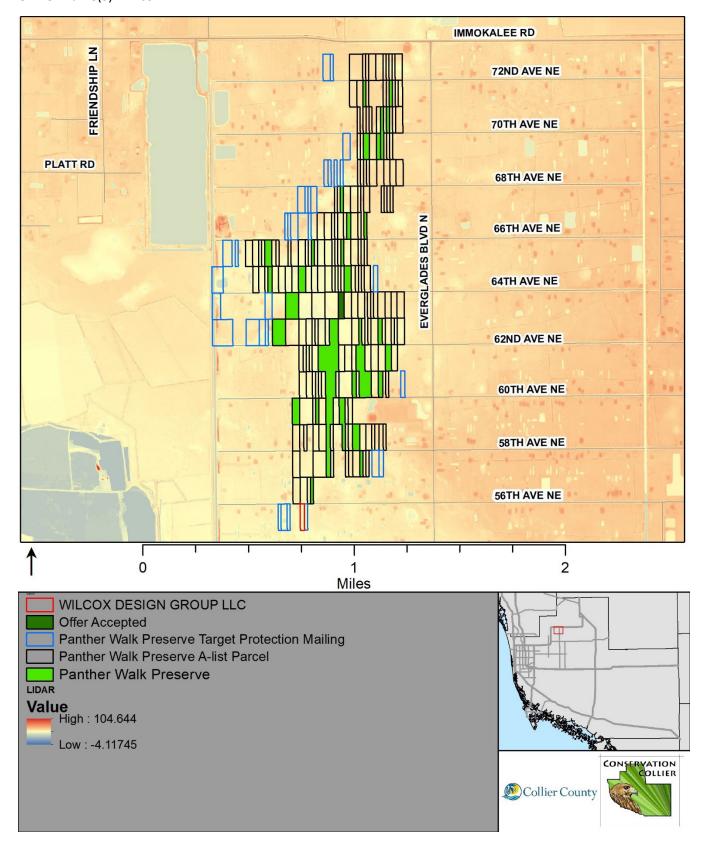

Figure 13 LIDAR Elevation Map

3.1.4 Ecosystem Connectivity

These parcels are connected to the existing Panther Walk Preserve Multi-parcel Project Area. The low-density nature of development in this neighborhood allows wildlife to move relatively unimpeded across the landscape and north into the Corkscrew Regional Ecosystem Watershed (Figure 13). A protected corridor is necessary to preserve wildlife's freedom of movement through this rapidly developing landscape. These parcels protect the highly diverse Horsepen Strand, expand the Panther Walk Preserve, and provide the backbone for a potential north-south corridor as well as necessary refugia for "urban" wildlife.

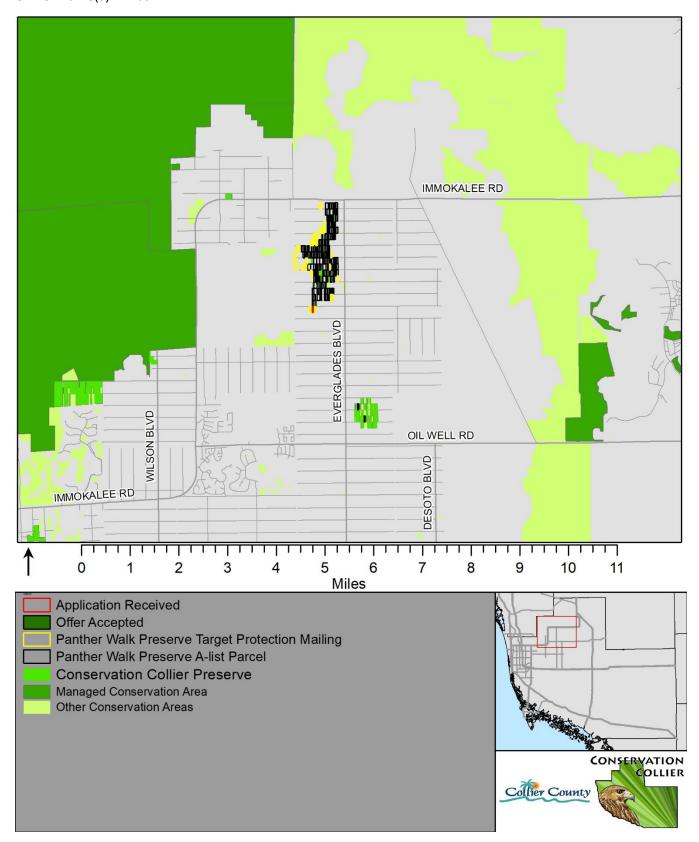

Figure 14 - Conservation Lands

3.2 Human Values

3.2.1 Recreation

These parcels provide seasonal opportunity for passive nature-based recreation such as hiking and wildlife watching. Once a contiguous string of parcels is acquired an up to two-mile trail may be installed.

3.2.2 Accessibility

Street parking is available along 56th-72nd Ave NE. Parcels within the strand may only be seasonally accessible while those along the perimeter may be dry year-round. Visitors from the surrounding neighborhood and Estates Elementary can walk or cycle to the trailhead.

3.2.3 Aesthetic/Cultural Enhancement

These parcels provide green space in a rapidly developing area and mature habitats found on these parcels provide aesthetically pleasing areas to visit.

Figure 15 – Mature cypress strand forest and marsh

3.3 Restoration and Management

3.3.1 Vegetation Management

3.3.1.1 Invasive Vegetation

Invasive vegetation is primarily found along the roadside swales but is intermixed throughout some parcels. Infestation rates range from less than 5% to 25%. Invasive vegetation is interspersed in such a way that replanting is not necessary once removed. Brazilian pepper, melaleuca, old-world climbing

Initial Criteria Screening Report – Panther Walk TPMA Owner Name(S): Wilcox

fern, and earleaf acacia are the predominant species. Low infestation rates, low seed source, and ease of access should reduce management costs significantly.

3.3.1.2 Prescribed Fire

Most parcels within this TPMA are wetlands which do not require prescribed fire maintenance. Some of the surrounding flatwoods would benefit from reintroduction of prescribed fire. These flatwoods are compatible with prescribed fire during the wet season. Fire breaks would need to be installed to protect nearby homes.

3.3.2 Remediation and Site Security

There are some off-road vehicle trails crossing the parcels. Historically, attempts to prevent off-roader trespass have been ineffective, expensive, and have resulted in additional vegetation damage as trespassers have cut new trails to circumvent the installed barriers. Instead of total prevention, the best method to mitigate further damage may be to attempt to restrict off-roaders to already established trails.

3.3.3 Assistance

Assistance is not predicted.

3.4 Vulnerability

3.4.1 Zoning and Land Use

The parcels are Zoned as Estates. Estates zoning provides lands for low density residential development in a semi-rural to rural environment, with limited agricultural activities. Allowable density is 1 unit per 2.25 acres, or 1 unit per lot if under 2.25 acres. In addition to low density residential density with limited agricultural activities, the E district is also designed to accommodate as Conditional Uses, Development that provides services for and is compatible with the low density residential, semi-rural and rural character of the E district. The wetland nature of most of these parcels makes them undesirable for development.

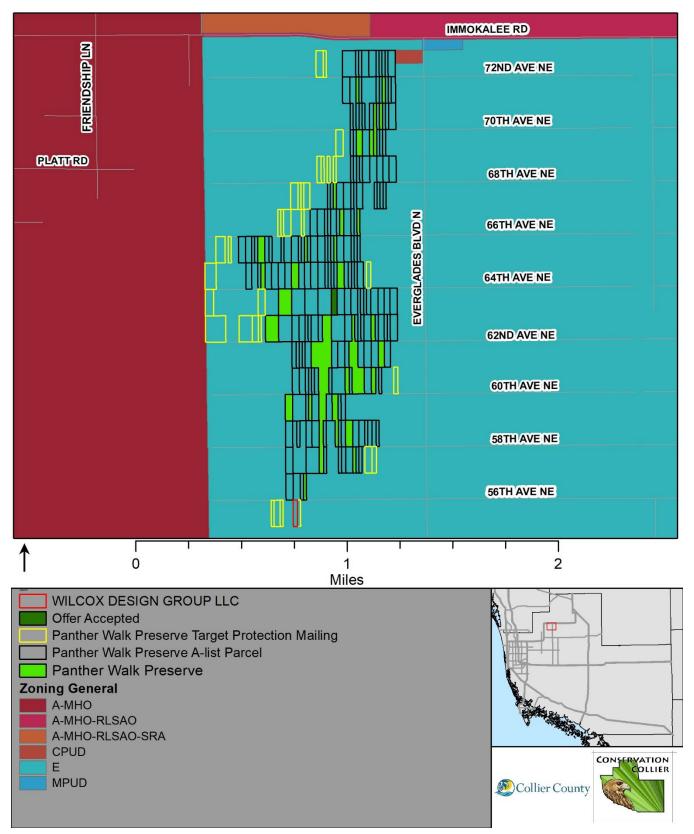

Figure 16 – Zoning

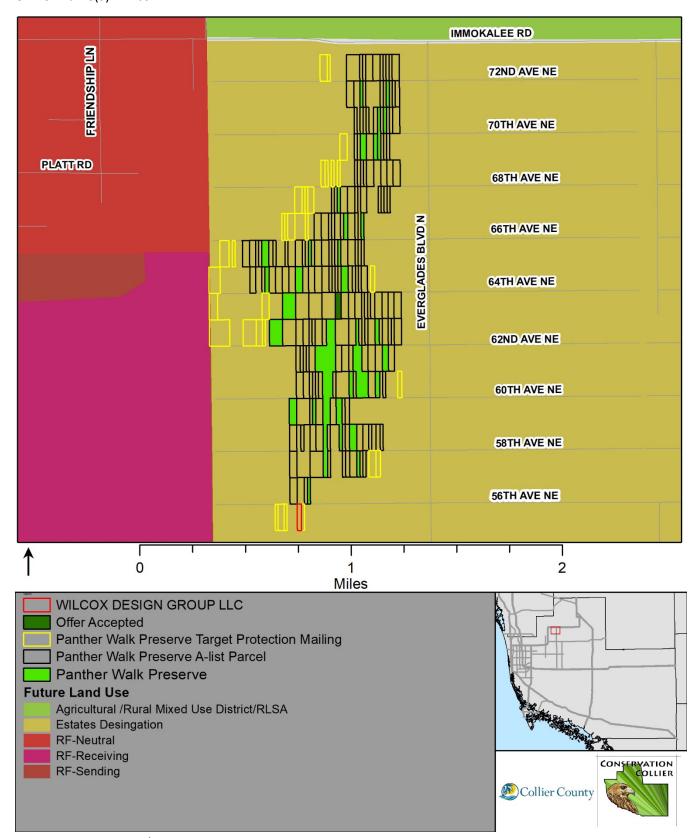

Figure 17 –Future Land Use

3.4.2 Development Plans

Individual parcels within this area are being rapidly developed. This patchy development threatens the ability to preserve contiguous swaths of habitat.

4. Acquisition Considerations

Staff would like to bring the following items to the attention of the Advisory Committee during the review of this property. The following does not affect the scoring. The following are items that will be addressed in the Executive Summary to the Board of County Commissioners if this property moves forward for ranking.

Staff recommend purchasing all parcels regardless of their proximity to the Panther Walk Preserve. This will allow for maximum flexibility in creating a contiguous corridor in the future and preserve the high-quality habitats observed. Although the matrix of undeveloped and partially developed lots in the Estates is compatible with many species, protected pockets of high-quality habitat provide necessary refugia and foraging grounds to complete the more secretive portions of their lifecycles. Even if not directly connected to a wildlife corridor or preserve, these refugia allow species to persist in increasingly developed landscapes.

5. Management Needs and Costs

Table 6 - Estimated Costs of Site Remediation, Improvements, and Management

Management Element	Initial Cost	Annual Recurring Cost	Comments
Invasive Vegetation Removal	\$14,120	\$7,060	\$200/acre initial, \$100/acre recurring. Low overall costs are predicted due to the low infestation levels and high accessibility. 70.6 acres total, not all parcels will be acquired simultaneously
Trail Installation and Maintenance	\$2,500	\$500	Hand cutting trails
Interpretive Signage	\$1,000		
Total	\$17,620	\$7,560	

6. Potential for Matching Funds

There are no known matching funds or partnership opportunities for acquisition in this area.

7. Secondary Criteria Scoring Form

Property Name: Panther Walk TPMA

Potential Listed Wildlife Species

Common Name	Scientific Name	Status
Florida bonneted bat	Eumops floridanus	FE
Florida panther	Puma concolor coryi	FE
Everglade snail kite	Rostrhamus sociabilis plumbeus	FE
Wood stork	Mycteria americana	FT
Audubon's crested caracara	Polyborus plancus audubonii	FT
Mangrove fox squirrel	Sciurus niger avicennia	ST
Tricolored heron	Egretta tricolor	ST
Roseate spoonbill	Platalea ajaja	ST
American alligator	Alligator mississippiensis	FT (S/A)

Status: FE=Federally Endangered, FT=Federally Threatened, FT (S/A)=Federally Threatened due to Similarity of Appearance, SE=State Endangered, ST=State Threatened, CE= Commercially Exploited

Non-Listed Wildlife Species Observed

Species	Scientific Name
nine-banded armadillo	Dasypus novemcinctus
eastern gray squirrel	Sciurus carolinensis
raccoon	Procyon lotor
North American river otter	Lontra canadensis
white-tailed deer	Odocoileus virginianus
black bear	Ursus americanus
cat	Felis catus
black racer	Coluber constrictor
chicken turtle	Deirochelys reticularia
southern leopard frog	Lithobates sphenocephalus
queen butterfly	Danaus gilippus
great blue heron	Ardea herodias
great egret	Ardea alba
green heron	Butorides virescens
American bittern	Botaurus lentiginosus
white ibis	Eudocimus albus
belted kingfisher	Megaceryle alcyon
anhinga	Anhinga anhinga
black-bellied whistling-ducks	Dendrocygna autumnalis
wild turkey	Meleagris gallopavo
red-shouldered hawk	Buteo lineatus
black vulture	Coragyps atratus
turkey vulture	Cathartes aura
American crow	Corvus brachyrhynchos
blue jay	Cyanocitta cristata
red-bellied woodpecker	Melanerpes carolinus
pileated woodpecker	Dryocopus pileatus
downy woodpecker	Dryobates pubescens
yellow-bellied sapsucker	Sphyrapicus varius
pine warbler	Setophaga pinus
northern parula	Setophaga americana
blue-gray gnat catcher	Polioptila caerulea
northern mockingbird	Mimus polyglottos
gray catbird	Dumetella carolinensis
mourning dove	Zenaida macroura
common ground dove	Columbina passerina
northern cardinal	Cardinalis cardinalis

APPENDIX 1 – Critical Lands and Water Identification Maps (CLIP) Definitions

This report makes use of data layers from the Florida Natural Areas Inventory and University of Florida Critical Lands and Waters Identification Project (CLIP4). CLIP4 is a collection of spatial data that identify statewide priorities for a broad range of natural resources in Florida. It was developed through a collaborative effort between the Florida Areas Natural Inventory (FNAI), the University of Florida GeoPlan Center and Center for Landscape Conservation Planning, and the Florida Fish and Wildlife Conservation Commission (FWC). It is used in the Florida Forever Program to evaluate properties for acquisition. CLIP4 is organized into a set of core natural resource data layers which are representative of 5 resource categories: biodiversity, landscapes, surface water, groundwater and marine. The first 3 categories have also been combined into the Aggregated layer, which identifies 5 priority levels for natural resource conservation.

Below is a description of each of the three CLIP4 data layers used in this report.

Figure 5: CLIP4 Priority Natural Communities

Consists of 12 priority natural community types: upland glades, pine rocklands, seepage slopes, scrub, sandhill, sandhill upland lakes, rockland hammock, coastal uplands, imperiled coastal lakes, dry prairie, upland pine, pine flatwoods, upland hardwood forest, or coastal wetlands. These natural communities are prioritized by a combination of their heritage global status rank (G-rank) and landscape context, based on the Land Use Intensity Index (subset of CLIP Landscape Integrity Index) and FNAI Potential Natural Areas. Priority 1 includes G1-G3 communities with Very High or High landscape context. Priority 2 includes G1-G3 Medium and G4 Very High/High. Priority 3 includes G4 Medium and G5 Very High/High. Priority 5 is G5 Medium.

This data layer was created by FNAI originally to inform the Florida Forever environmental land acquisition program. The natural communities were mapped primarily based on the FNAI/FWC Cooperative Land Cover (CLC) data layer, which is a compilation of best-available land cover data for the entire state. The CLC is based on both remote-sensed (from aerial photography, primarily from water management district FLUCCS data) and ground-truthed (from field surveys on many conservation lands) data.

Figure 10: Potential Habitat Richness CLIP4 Map

This CLIP version 4.0 data layer is unchanged from CLIP v3.0. FWC Potential Habitat Richness. Because SHCAs do not address species richness, FWC also developed the potential habitat richness layer to identify areas of overlapping vertebrate species habitat. FWC created a statewide potential habitat model for each species included in their analysis. In some cases, only a portion of the potential habitat was ultimately designated as SHCA for each species. The Potential Habitat Richness layer includes the entire potential habitat model for each species and provides a count of the number of species habitat models occurring at each location. The highest number of focal species co-occurring at any location in the model is 13.

Figure 11: CLIP4 Aquifer Recharge Priority and Wellfield Protection Zones

High priorities indicate high potential for recharge to an underlying aquifer system (typically the Floridan aquifer but could be intermediate or surficial aquifers in some portions of the state). The highest priorities indicate high potential for recharge to springs or public water supplies. This figure also includes Wellfield Protection Zones. Collier County Wellfield Protection Zones are referenced in the Land Development Code and updated in 2010 by Pollution Control and Prevention Department Staff. The public water supply wellfields, identified in section 3.06.06 and permitted by the SFWMD for potable water to withdraw a minimum of 100,000 average gallons per day (GPD), are identified as protected wellfields, around which specific land use and activity (regulated development) shall be regulated under this section.
